What's New in Version in 2.1.5

The 2.1.5 release of the NeedToMeet Outlook Add-in resolves issues discovered since the release of version 2.1.4, and adds new features.

Release Notes 2.1.5

- When you change a **Publish Access** setting from *Availability and Subject/Location* back to *Availability only*, or vice-versa, previously published calendar items are now automatically updated to honor the new setting. (17398)
- When you make any change to *Selected Calendar Settings*, NeedToMeet now prompts you to **Save** or **Cancel** the change(s) before you can select a different calendar to configure. (17381)
- On the *Calendar Settings* screen, the **Publish Data** setting (for a selected calendar) no longer offers the *Do Not Publish* option. When you open the settings for a calendar that was previously set to *Do Not Publish*, NeedToMeet prompts you to choose one of: *Update to Availability Only*, *Update the setting manually*, or *Remove this calendar* altogether. (16444)
- The *Calendar Settings* screen now displays a status note to indicate when a calendar sync is in progress, either by your clicking **Sync Now** or by the regular publishing interval. Also, the **Sync Now** button is now disabled when a calendar sync is in progress. (18086)

- The setting for **Append Personal URL to all NeedToMeet Messages** (on the *Account Settings* screen) is now preserved when the settings are saved and then reopened. (18261)
- This release corrects a typo in the *User Configuration* screen (in the *Configuration Wizard*), and one of the sentences on the same screen has been edited for clarity. (17629)
