## What's New in Version in 2.1.7

This release of the NeedToMeet Outlook Add-in resolves issues discovered since the last release, and adds new features.

- NeedToMeet now reads the cached autodiscover in Outlook for free/busy lookups, for faster performance in subsequent queries (after the first query per contact). (17570)
- For a previously synced group, NeedToMeet now correctly removes the group's users when you remove the group. (19088)
- NeedToMeet now supports multiple calendars sharing the same calendar name, differentiating among them by entry ID instead of by calendar name as in prior releases. (19230)
- Back-end support for new licensing features to be introduced in an upcoming release. (19246)
